Hello Recruiting Engineering Team

I am happy to apply for the Cloud DevOps role in your company. I am a passionate engineer willing to work creatively for the greater good of your organization, I have experience in Frontend development where I demonstrate the ability to showcase my problem-solving skills working on web app projects using Angular and Rxjs, and I will be so excited to work at Salesforce to revolutionize customer experience in the Cloud.

For the past 3 years, while I was working as a Frontend Developer, I worked closely with UI/UX designers to deliver an exemplary user interface and experience to our customers, I also worked on SEO optimization which increase our company's presence on Google and other search engines.

To follow my passion for Cloud development, I completed the Udacity Cloud Development Nanodegree program, where I learned about AWS EC2, S3, Cloud formation, VPC, DynamoDB, RDS, Lambda Functions, Serverless Technology, IaC, etc…, more lately I have completed some personal projects using most of the knowledge I have gained to practice my skills.

I hope Salesforce feel the desire I have to work in their team as an incoming Cloud DevOps willing to learn along and improve every day by delivering the best experience of Cloud technology to the customers, I am available for a remote meeting anytime and I am looking forward to speaking with you for further discussion, Thank you for your consideration.

Best Regards,

Abraham Olamide James
